

Cabana

Fernando and Humberto Campana

General description:

Container with a central bearing structure and 5 circular shelves with decreasing diameter, completely covered by a tent of long thick strands of viscose raffia fiber, which are flame retardant thanks to a special treatment. These strands, fixed at the top of the "cabana", extend to the floor, creating a mysterious volume that can be opened anywhere.

Technical description:

The storing perimeter corresponds to about 11 linear meters of bookcase.

Covering in viscose raffia fiber.

Structure with a central bearing pillar and 5 brown lacquered steel shelves.
